

CholiNex

Choline chloride 60% w/w on veg carrier

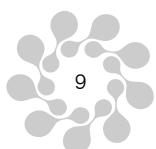

Choline Chloride is an essential nutrient and finds its main application as a feed additive. It is commonly classified as a vitamin, and was formerly known as vitamin B4. Like other vitamins it plays a significant role in nutrition but its daily requirement seems to be hundreds of times greater than that of other vitamins. CholiNex 60 is prepared from EASTMAN- BELGIUM liquid concentrate

Composition :

Choline chloride 60% w/w on veg carrier

Benefits:

- Choline is a constituent of phospholipids, thereby it is essential for the formation of new cells. It ensures the normal maturation of the cartilage matrix of bones (Perosis in broilers occurs due to the deficiency of Choline).
- Choline has a major role in fat metabolism in the liver. It facilitates metabolism and outward transport, thus preventing abnormal accumulation of fat within hepatocytes which may lead to "fatty liver".
- In layer birds, Choline has a major role in the formation of the phospholipid lecithin, a component of egg yolk. Therefore, it is indispensable for egg formation.
- As a precursor molecule for the synthesis of the neurotransmitter acetylcholine, it is indispensable in muscle control functions.
As a source of labile methyl groups, it is essential for numerous biological processes.

CholiNex

Choline chloride 60% w/w on veg carrier

Directions for usage :

■ Poultry-

Broilers:

- Starting (0-8 weeks)- 500 to 700gm per ton of feed
- Growers (8- 18 weeks)- 300- 600gm per ton of feed

Layers-

- Commercial layers- 250- 600gm per ton of feed
- Breeders- 300- 600gm per ton of feed

■ Turkeys-

- Starter feed (0- 8 weeks)- 800-1000gm per ton of feed
- Fattening (8 weeks till end)- 500- 700gm per ton of feed
- Breeders- 500- 700gm per ton of feed

■ Ducks-

- Breeder or commercial- 900gm per ton of feed

■ Pigs-

- Starters (10-25kg)- 300-600gm per ton of feed
- Growers (25-60kg)- 200-400gm per ton of feed
- Finishing (60 kg till end)- 150-300gm per ton of feed
- Gestating / Lactating sows- 150-500gm per ton of feed

■ Fishes-

- Depends on species- 300-800gm per ton of feed

■ Shrimps-

- 400-600gm per ton of feed

■ Calves-

- 200-300gm per ton of feed

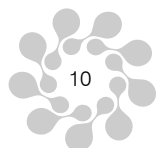

■ Dogs-

- 1000-1200gm per ton of feed

■ Cats-

- 1000-1400gm per ton of feed

Packing: 25 kg bag
